Building a GIF Search Engine!

✓ Completed

Week 2: DOM Manipulation · Lesson 12 ·

Lesson Notes

Discussion (9)

We finally get started on our GIF Search Engine. You'll download a template project and start building from there. The first task is to grab the user's input from the HTML Search Bar. Let's jump right in!

Download the Template

Add to *main.js*

```
/* 1. Grab the input value */

var input = document.querySelector("input").value;
console.log(input)

/* 2. do the data stuff with the API */

/* 3. Show me the GIFs */
```
