# The 10 Concepts That are The Same In Every Programming Language

✓ Completed

Week 1: JavaScript Basics · Lesson 1 ·

There are 10 concepts in JavaScript that are the same in nearly every programming language. In this lesson, we'll go through some of them namely: Events, Comments, Print, Variables, Data Types, Conditionals, Functions, Arrays, Concatenation and Debugging. In the lesson, you'll get a preview of the first application you are going to build as you learn these concepts. Exciting times ahead!

## Copy the code into Sublime

1. Create a new file in Sublime
2. Copy all this code into Sublime
3. Save it as a new file: index.html

```
<!DOCTYPE html>
<html>
  <head>
    <title>Oprah Likes You. And so do other people.</title>

    <style>

      /* Basic CSS comment */
      body {
        background: #BBB;
        color: white;
        width: 960px;
        margin: 0 auto;
      }

      h1 {
        font-size: 80px;
        color: #333 ;
      }

    </style>

  </head>

  <body>
  </body>

</html>
```
