For Loops in JavaScript

☑ Completed

Week 2: DOM Manipulation · Lesson 9 ·

Lesson Notes   Discussion (13)

Loops offer a quick and easy way to do something repeatedly until a certain condition is met. They can be used to execute a block of code a number of times.

```html
<!DOCTYPE html>
<html>
<head>
    <title>For Loop</title>
</head>
<body>

<script type="text/javascript">

    var beatles = ["John", "Paul", "Ringo", "George"];

    for(num = 0; num<4; num++) {
        document.write(beatles[num] + "<br>");
    }

</script>
</body>
</html>
```
